## WHAT IS CYSTIC FIBROSIS?

Cystic fibrosis (CF) is the most common life threatening genetic condition in Australia – and there is no cure. CF is a degenerative condition that affects many of the body's systems, including the lungs and digestion. Queenslanders diagnosed with CF live through daily physiotherapy and medications, amongst other treatments, just to survive.

## ABOUT CYSTIC FIBROSIS QUEENSLAND

Last year CFQ provided services to over 850 children and adults living with CF and their families. Only 6% of our funding comes from government, which means we need to raise \$94 in every \$100 we spend on our clients. The financial support received through bequests, sponsors, donors and members is vital to continue our work.

# ORDER FORM: MERCHANDISE KIT

Each kit contains: 10 pens, 10 Rubik's Cube keyrings,
